

International – Pipe infrastructure for the 21st century

Pipe infrastructure that deserves the attribute “sustainable” is needed everywhere all over the world. In nations with a long tradition of sophisticated water management, plastic corrugated pipes of GIGAPIPE® characteristic fit the criterion sustainability due to:

- › an excellent life cycle assessment.
- › the reliable protection of humans and the environment against toxic, harmful wastewater for at least 75 years.
- › widely elimination of infiltration.
- › significant reduction of operating and maintenance costs for decades to relieve operator’s budgets.
- › additional benefits in the field of energy recovery in sewers, geothermics, water storage, percolation, etc.

Corrugated Pipe Solutions by DROSSBACH as a unique product and service portfolio from one hand are advantageous to nations with a high accumulated demand of infrastructure or with necessity of expansive development of pipe systems due to:

- › comparative low investment and installation costs.
- › easy, manual handling & fast constructional progress.
- › robustness of all system components and high tolerance towards imperfect installations and beddings, translocations and even earthquakes.
- › reliability of the system in particular according to dynamic changes of use during the course of decades.
